LeRobot tiny predictor / same 18 CUDA-trained checkpoints / post-hoc CPU diagnostics
Recursive error grows despite better one-step fit
old: recursive
old: true history
new: recursive
new: true history
input > 8 frames
Feature MSE
Prediction horizon (starts after 2 true frames)
Exact feature-error decomposition
True-history residual
Feedback shift
Cross term
Mean 15-step feature MSE
0.19015
0.20038
Old
Corrected
More error alignment outweighs smaller defects
Weighted defect squares
Cross-time products
Mean 15-step position MSE
0.09783
0.10418
Old
Corrected
Descriptive paired means over 3 folds and 3 initializations; synthetic features; no new training or significance claim.
